

GSI AudBase Audiology Database Management Software

OVERVIEW

VIASYS NeuroCare, the industry leader in screening and diagnostic audiometric equipment, announces AudBase software for its GSI diagnostic systems.

ENHANCED TECHNOLOGY

AudBase is a new database software that is compatible with GSI diagnostic systems. In this age where offices are moving to paperless data storage, clinicians still prefer a dedicated audiometer and tympanometer in their daily practice. Now, with AudBase, you can have the best of both worlds. The AudBase software works in conjunction with the data output from the GSI diagnostic devices in order to provide a database and report writing features.

SPECIAL FEATURES

- **Compatible with:**
 - GSI 61
 - GSI TymStar
 - GSI Arrow
 - Previous models of GSI 10, GSI 16 and GSI 33 with serial output
- **Report writer with customized printout options**
- **Stand-alone or network applications**
- **Meets HIPAA regulations for security**
- **Comparison feature of serial audiograms**
- **Plot audiograms up to 20 kHz**
- **Choice of report styles that allow audiogram and tympanogram on the same report**
 - OAE/ABR combination including TE OAE and DP OAE
 - OAE only configuration with TE OAE and DP OAE
 - ABR only configuration
